

Maxim-X Airbox Intake Shield

Yamaha Part #: 1AA-2176E-00-00 - "PLATE"

I've tried replicating this part using various different materials including cardstock, cork, gasket material, plastic and aluminum. The best results came from tracing this template onto a thin polycarbonate such as is used in duotangs and tupperware storage containers. The material is thin enough to cut with scissors but rigid enough to hold its shape when installed around the airbox intake. It's also readily available and cheap at any dollar store.
